

Ibrahim Butt

Game Developer

A Game developer over 4 years of experiences with multiple game titles across web, pc and mobile. Focusing mainly Gameplay, Multiplayer and Backend.

Devsinc

Senior Software Engineer

Feb 2025 - Present

- Designed and shipped multiplayer systems using Photon Fusion 2 for a 27-player battle royale (Nanocry), implementing lag compensation, client-side prediction, and server-side validation with ~10ms latency
- Designed matchmaking, dedicated server deployment (Unity Game Server Hosting/Multiplay), and host migration pipelines for large-scale real-time sessions supporting 80+ concurrent players
- Built cost-optimized backend on Azure Functions + PlayFab, integrating authentication, match statistics, and player progression; reduced hosting costs by ~60%
- Implemented state synchronization and data compression in networked gameplay, reducing bandwidth usage by ~28%
- Integrated blockchain/NFT infrastructure into Sacred Tails with MetaMask wallet authentication and on-chain playable character ownership across iOS/Android platforms
- Resolved critical memory leaks and asset management issues in Sacred Tails using Unity Profiler + Addressables; introduced compression, LOD tuning, and low-end device settings, cutting RAM usage by ~65% and eliminating mobile crashes
- Optimized CPU/GPU performance via Unity Profiler and GPU profiling tools, achieving consistent 60 FPS from an unstable 30 FPS baseline across target platforms

Katana Games

Software Engineer

Apr 2022 - Feb 2024
